• TMVR can become a revolution in treating mitral valve disease, but it will not be easy

• Compared with TAVR, we must:
  – Change our set-up
    • Clinical
    • In-hospital/procedure
  – Screen patients differently
  – Manage them differently

• If we do these things, TMVR will truly be a revolution
What did we study?
How was the study executed?
What are the essential results?
Why is this important?
The essentials to remember
